# All sound systems need a power panel - why not have ONE TOUCH AC power control? Motorized circuit breakers sequence sound system AC power! 

MSLC 326-xx
Modular Sequencing Load Center
LynTec
Modular Sequencing series Power Panels

## BENEFITS

## ONE TOUCH remote power control

- Immediate visual feedback provided by flashing ON switch
- Light stays ON to verify sequence completion.
- Process is reversed for turn-off sequence.
- May be controlled from one to six locations.
- Multiple sequencing panels may be daisy-chained for larger systems.

## $\checkmark$ Reduced installation labor

- One wall-mounted, sequenced power panel feeds AC power to all rack and console receptacles.

## Low power consumption

- BMB (Bolt-on) and MB (Clip-on) series motorized circuit breakers require no holding current (like DC relays) or heat sinks (like solid state relays).
- Runs cool - lasts long.

LynTec Modular Sequencing series panels add branch circuit sequencing to the main and branch circuit breaker functions normally found in a Load Center or Panelboard.

## How they work

Applies AC to low level, front-end electronics... waits for them to stabilize... (clicks and pops are ignored by un-powered power amplifiers)...
$A C$ is then sequenced to power amplifiers to spread high inrush currents over time.
Protects valuable loudspeaker systems by delaying turn-on until all low level equipment has stabilized.

## ONE TOUCH

 REMOTE POWER CONTROLSHOWN ACTUAL SIZE

## SS-2 Sequencer Switch Set

One SS-2 switch set is supplied with each panel.

## Automatic load shedding and BROWNOUT protection

- A voltage sensing system automatically sheds the load when AC mains voltage drops below 95 volts for 2 seconds.
- Capacitor-stored energy zips-off all circuits 2 seconds after power fails.
- The system automatically re-sequences without operator intervention when stable voltage (above 105 volts for 5 seconds) resumes.
- Reduces the start-up load for auxiliary power units.
- Smart wake-up is ideal for unattended systems.

Kill

- Emergency instant shutdown may be triggered by an external contact closure.
- System automatically re-sequences when contact opens.

HurryOff — Ohh..... no...... switch - Kill without restart

- By holding any OFF switch down for 2 seconds, the operator can trigger an instant shutdown with no automatic restart.

## How it works

The SEQUENCER POWER circuit breaker powers the sequencer circuit boards via a 24 volt transformer.

Motorized circuit breakers (marked REMOTELY OPERATED) are time sequenced by relays in the adjacent, left-side, low voltage sequencer cabinet.
The ON or OFF sequence is initiated at remote sound system locations and may be locally tested with the top green ON and bottom red OFF buttons on the circuit boards.

Sequenced breakers are sequenced on (Steps 1 to 6) and off (Steps 6 to 1) at $1 / 8$ to 1 second intervals and may have a programmed PAUSE DELAY of up to 8 minutes during the sequence. These STEP RATE, DELAY TIME and DELAY POSITION settings are set by moveable jumpers inside the sequencer cabinet.

Each 6 step sequencer board controls up to 12 breakers by turning on and off two breakers per step.

The circuit boards are factory daisy-chained, top-to-bottom, with the Cascade Connector (4 pin) set.
The Power \& Kill Connector (4 pin) set carries power, common and Kill signals.

## ZIP-OFF load shedding

2 seconds after a power failure, the sequencer turns off all sequenced breakers. When power resumes the sequencer automatically re-sequences the system on.

ZIP-OFF may be demonstrated by turning off the SEQUENCER POWER breaker momentarily.

# QO-PL (Plug-on), QOB-PL (Bolt-on) Powerlink ${ }^{\circledR}$ Remotely Operated Circuit Breakers <br> (Use in Type QO Load Centers and Type NQO, NQOB, and NQOD Panelboards) 

Retain for future use.

## REQUIREMENTS

## Remotely Operated Circuit Requirements

## A. DANGER

HAZARD OF ELECTRIC SHOCK, BURN, OR EXPLOSION.

When servicing a branch circuit fed by a remotely operated circuit breaker, move handle of remotely operated circuit breaker to OFF position. Do not rely on remote operation to open circuit breaker.

Failure to follow these instructions will result in personal injury or death.

## CIRCUIT BREAKER INSTALLATION

## DANGER

## HAZARD OF ELECTRIC SHOCK,

 EXPLOSION, OR ARC FLASH- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices. See NFPA 70E.
- This equipment must be installed and serviced only by qualified electrical personnel.
- Turn off all power supplying this equipment before working on or inside equipment.
- Always use a properly rated voltage sensing device to confirm power is off.
- Replace all devices, doors, and covers before turning on power to this equipment.

Failure to follow these instructions will result in death, or serious injury.

## See page 2 for LynTec part number explanation

POWERLINK ${ }^{\circledR}$ QO(B)-PL Remotely Operated Circuit Breakers require a power supply capable of delivering at least two amperes at 24 Vdc for a minimum of 50 milliseconds. One-, two-, and three-pole circuit breakers all have one internal motor, and power requirements are the same regardless of the number of poles and ampere ratings.

The required power supply ampacity and control device contact rating are determined by the number of circuit breakers to be switched simultaneously (i.e., four circuit breakers switched simultaneously require a power supply and a control device contact rated 8 amperes minimum). The control device may be either a normally-open (NO)/ normally-closed (NC) contact; a single-pole, double-throw switch (SPDT); or other three-wire control device.

1. Turn off all power supplying this equipment before working on or inside equipment.

All LynTec supplied breakers have special 60" control wires. (Square D standards are 18".)
figure below)

4. Except for remotely operated connections, QO(B)-PL remotely operated circuit breakers are installed in a panelboard/load center the same as conventional QO(B) circuit breakers.

Connection of remotely operated circuit (refer to the figure on next page)
5. Assure that power supply and control device meet requirements listed under "Remotely Operated Circuit Requirements."

## CIRCUIT BREAKER INSTALLATION

## CAUTION

## HAZARD OF CIRCUIT BREAKER DAMAGE.

Connect the 24 Vdc remote control wiring as shown on this page.

## Failure to follow these instructions can permanently damage the remotely operated circuit breaker.

## LynTec <br> part numbers

MB series motorized circuit breakers (Snap-On) May be used in LCLC, LCP, MSLC, MSP, SLC or SP series panels.

BMB series motorized circuit breakers (Bolt-On) Use only in LCP, MSP or SP Panelboards
All BMB \& MB series breakers have Square D part number suffix of -5393 indicating a special 60 inch lead length for remote control wires required to connect to LynTec control boards in low voltage cabinet.

www.SquareD.com
6. All wiring and splicing must comply with applicable code requirements for Class 1 circuits. Refer to paragraph 373-8 and article 725 of the National Electrical Code.
7. Three \#18 AWG control wires are attached to the remotely operated circuit breaker for connection to the power supply and remote control device and should be cut to the required length to reach the splice connections. Use \#18 AWG or larger conductors with 600 V insulation and approved wire connectors for splices.
8. Connect the black lead of the remotely operated circuit breaker to the negative (-) terminal of the 24 Vdc power supply. Connect the red lead of the remotely operated circuit breaker to the positive (+) terminal of the 24 Vdc power supply. Connect the white lead of the remote control device. The remote control device provides connections between either positive or negative potential of the power supply and the white wire of the remotely operated circuit breaker, as appropriate.
9. Applying the positive potential of the power supply to the white wire (contact closure between the red wire and white wire) will operate the remote mechanism of the circuit breaker to the OFF position. Applying the negative potential of the power supply to the white wire (contact closure between the black wire and the white wire) will operate the remote mechanism of the circuit breaker to the ON position. A control circuit utilizing a normally open (NO)/normally closed (NC) contact is illustrated below.

NOTE: The remote mechanism will not move the circuit breaker handle. Also, the remote mechanism cannot turn power ON when the circuit breaker is tripped (VISI-TRIP ${ }^{\circledR}$ flag indicator showing) or when the circuit breaker handle is in the OFF position.

## Installation of the trim and operational checks

10. Remove corresponding twist-out from panelboard trim and replace trim.
11. Turn power to panelboard on.
12. Turn remotely operated circuit breaker handle to the ON position.
13. Turn power to the remotely operated circuit on and test this circuit, turning remotely operated circuit breaker off remotely, then on remotely. If power to remote controlled circuit breaker load does not switch off and on, turn off power to remotely operated circuit and panelboard and check wiring.

NOTE: A power supply is available from Square D Company, Cat. No. QOPLPS (plug-on) or QOBPLPS (bolt-on).

Splice not normally required with

Electrical equipment should be installed, operated, serviced and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

# Built-in Kill, Hurry-Off and ZipOff (PANIC) switch option for MSLC and MSP and PDS-8EK series AC SEQUENCING SYSTEMS 

## What the functions do

## Kill - EMERGENCY SHUTDOWN

Provides an IMMEDIATE shut down method for the sound system at the command of a fire alarm, emergency announcement system, or ZipOff switch.

## Optional ZipOff switch, ZOS-5K

Provides a full AC Power shutdown within 250 milliseconds after the ZipOff button is pushed.
In case of a runaway oscillation or other unexpected signal which could damage the loudspeakers if sustained...
Lift the protective cover and press the ZipOff button... it latches down and lights red. The AC power sequencing system immediately zips off.
Press again to unlatch... the light goes out and the sequencer restarts to repower the system.

## or

Use the new Hurry-Off function at any OFF switch.

## MULTI-BOARD SHUNT R

The Kill line is an 11 ma . current source from each MS-12 Modular Sequencer or PDS-8 EK board

A voltage sensor on the Kill line determines the Kill threshold.
The Kill line has an open circuit voltage of 28 volts which must be pulled down to less than 10.5 volts to generate a Kill function. Grounding the Kill line to Common will always kill the system instantly. This current source may also be used to light the Zip-Off switch's, red LED.

The red ZipOff LED only requires 10 ma . For systems where multiple-board system's Kill lines are paralleled, a 9 v . voltage regulator chip is installed in the ZOS-5K which will automatically shunt the excess source current of up to 5 boards. For more than 5 boards an additional resistor must be used in parallel with the ZipOff switch LED. To prevent damage due to overheating the voltage regulator chip, the resistor should be installed as shown with full length leads to get the heat source away from the switch.

| Total Number of boards | Shunt Resistor required |  |
| :---: | :---: | :---: |
| 1-5......... | .... none |  |
| 6 ........ | .. $820 \Omega, 1 / 4 w$ | 16 ............. 75s, 2 w |
| 7 .......... | . $430 \Omega, 1 / 4 w$ | $17 . . . . . . . . . . . . .68 \Omega, 2 w$ |
| 8 .......... | .. 270s, 1/2w | $18 . . . . . . . . . . . . .62 \Omega, 2 w$ |
| 9 ........ | 200ת, 1/2w | $19 . . . . . . . . . . . . .58 \Omega, 2 w$ |
| 10 ........ | .. 150 ${ }^{\text {c }}$, 1/2w | $20 . . . . . . . . . . . . .56 \Omega, 2 w$ |
| 11 ......... | .... 150 ${ }^{\text {, } 1 \mathrm{w}}$ | $21 . . . . . . . . . . . .51 \Omega, 2 w$ |
| 12 ....... | .... 120ת, 1w | $22 . . . . . . . . . . . .448, ~ 2 w ~$ |
| 13 ......... | ..... 100 ${ }^{\text {, }} 1 \mathrm{w}$ | 23............. 47 ${ }^{\text {, }}$ 2w |
| 14 ......... | ..... 92, 1w | 24 ............. 43S, 2w |
| $15 . . . . . .$. | .... $82 \Omega, 1 \mathrm{w}$ | $25 . . . . . . . . . . . .398, ~ 2 w ~$ |

## What to specify or order

For ZipOff switch order ZOS-5K. (services up to $\mathbf{5}$ Kill equipped boards) Includes switch with ZipOff film legend and flip up security cover.
Switch mounts in $5 / 8^{\prime \prime}$ round hole in panels up to $3 / 16^{\prime \prime}$ thick.
ZOS-5K Contractor C.O.D. price: \$40.

## Hurry-Off

The MS-12 Modular \& PDS-8EK Sequencing boards have a new Hurry-Off function. If you hold down any OFF switch for two seconds, a "Kill without restore" function is triggered. The system shuts down within 250 milliseconds and doesn't restart until you give it a new ON command. Kinda like a DSP undo command.

## How they work

All LynTec sequencing systems have the ZipOff load shedding feature. The older SLC, SP and PDS-8's implemented it by interrupting 24 v ac power.
The newer Modular sequencers, the MSLC and MSP series and the PDS-8EK, load shed when power fails, but also have a Kill function that is triggered by grounding the Kill line.
The red Kill LED, adjacent to the Kill terminal on the board, lights and Zip-Off is immediate. The kill line is a low current line. Long control wiring may be used without concern for loop resistances up to $32 \Omega$. (22 gauge, up to a $1,000 \mathrm{ft}$. run [ $2,000 \mathrm{ft}$. loop] or a 680 ft . run of 24 ga ). The ON/OFF latching pilot relay remembers that the sequencer was ON. When the Kill line is opened, the ON sequence repeats, bringing the AC power back on. For the Modular series control boards the ZipOff switch connects the Kill line to common, through the Zip-Off switch's LED, initiating the Kill function.

## LynTec <br> for Modular A.C. Sequencing Systems, models MSLC, MSP \& PDS-8EK. ON, OFF and ZipOff switch mounting \& wiring

## Wire requirements

Switch set to sequencer: 4 conductors.
Between daisy chained Modular sequencers:
9 conductors, 11 if Power Vouchers are used.
Up to 5,000 ft run: 22 ga.,
5,000 to 7500 ft . run: 20 ga .
7,500 to $10,000 \mathrm{ft}$. run: 18 ga .
