LynTec Announces SurgeX Protection on the Side

January 23, 2012 – Lenexa, KS – LynTec the leading provider of controllable AV circuit breaker panels is pleased to partner with another industry leader and announces the addition of SurgeX® protection to its panels.

LynTec circuit breaker panels can now be ordered with SurgeX® “sidecars” which provide individual surge protection on a per circuit basis. SurgeX® protection can be provided on any or all of the circuits within the panel. Any circuit protected by SurgeX® includes the full SurgeX® connected warranty of protection. This warranty protects and insures any equipment connected to the SurgeX® protected circuit.

“The SurgeX® side cars provide us the ability to offer our clients the opportunity to monitor individual circuits for surge protection,” states Mark Bishop, President of LynTec. “We see this as another way we can help our clients ensure power reliability and provide AV system designers & integrators with additional options for surge protection where fluctuating power conditions warrants this.”

About SurgeX®

SurgeX® is located in Zebulon, NC and is the leading manufacturer of premium AC power conditioning products for the professional and residential audio, video, and multi-media marketplace. Their patented technology is built exclusively to properly protect ProAV and home theater equipment from AC surges and electrical transients that can disrupt sound quality and digital performance. For more information on SurgeX® visit www.surgex.com.

About LynTec

LynTec brings to market electrical protection and circuit switching capabilities in the same enclosures. In doing so, the company has always found ways to save space, lower system installation costs and build trusted relationships with audio system and lighting designers. It's expansion into electrical and lighting controls, and now its growth into expanded lighting control, energy monitoring, built in power conditioning, and mobile applications continues to position the company as a leading resource for the AV and lighting industries and an integral partner for sustainable energy practices.
