Transfer as-built information to the door label upon completion.

Keep this sheet for as-built documentation

Available as PDF download
www.lyntec.com/139-0379_LCP341-M225Plnr.pdf

Each motorized breaker is actuated by a command from a DMX control device.
As-built door label example:
The DMX # _____ is the DMX address of this breaker.
The board jumpers set the DMX address of the #1 position of the board.
Positions 2 to 10 are subsequent addresses. Example: #1= 201, #2 to #10 = 202 to 210.
Bold line around box ☐= ***suggested*** control board: #1 (Top), #2, #3 or #4.
Fill in ▮ box to indicate which control board this breaker is connected to.

LC-10M Master & LC-10S Slave circuit boards in left-hand, low-voltage cabinet.

DMX PROTOCOL for **LynTec LC** series		
Code Range (8 bit)	%	Circuit Function
0-63	0-24	Turns breaker off. When applied to all relays simultaneously, they turn OFF at a .25 second step rate.
64-191	25-74	No change
192-255	75-100	Turns breaker on. When applied to all relays simultaneously, they turn ON at a .25 second step rate.

EDO **on** | Post EDO **on**

EDO Programming
Emergency **D**MX **O**verride

For egress or emergency lighting triggered by an external contact.

Connecting **EDO** to **Com**mon with an external contact overrides the incoming DMX signal and forces all breakers to the pre-programmed **EDO** state.

How to program **EDO**

A. Turn the **DMX CONTROL POWER** off.

B. Note the DMX Starting Address _____.

C. Move jumpers to reset the **DMX STARTING** Address to 555.

D. Turn the **DMX CONTROL POWER** on. The board will scan through the breakers 1 thru 10 and display the previous EDO settings if there are any stored in memory. All numbered LEDs that were on when the EDO setting was stored will light.

E. Press the green **EDO ON-OFF Toggle** button once. The #1 breaker LED will flash; Fast for ON — Slow for OFF. **Toggle** the same green button to the desired state of the #1 breaker.

F. Advance to breaker #2 with the red **EDO Advance** button. (#1 now indicates the condition you left it in. Lit = ON)

G. Set the rest of the positions, having breakers connected, to your desired EDO condition. Finish your settings with one more **EDO Advance** keystroke. All breaker LEDs will indicate their EDO state. If you change your mind, you can loop back to 1 with another **Advance** keystroke. #1 will begin flashing again to indicate it's ready to edit.

H. To store your EDO settings, turn **DMX CONTROL POWER** off and wait until the large red LED extinguishes.

I. Reset the DMX Starting Address jumpers to the one remembered in step B.

J. Turn on DMX CONTROL POWER. Now whenever you connect the EDO terminal to common, the red EDO LED will light and your stored EDO settings will *override* any DMX commands until the emergency contact is opened.

If you have programmed Post EDO, all circuits will go to that scenario when the emergency contact is opened.

With no Post EDO program all breakers default to off and will require another DMX command to actuate.

You have the option to program the Post EDO condition to reset the breakers to a different condition when the EDO contacts are reopened.

How to program **Post EDO**

K. With power off, move jumpers to reset the DMX Starting Address to 599.

Return to step D. to program **Post EDO.**

How it works

The **DMX CONTROL POWER** circuit breaker powers the control circuit boards via a 24 volt transformer.

Motorized circuit breakers (face-marked **REMOTELY OPERATED**) are individually actuated by a low-voltage command from a remote DMX control device. (light board)

Each of the *numbered* LEDs, 1 thru 10, indicate the status of the attached breaker.

Lit = ON — Unlit = OFF

Flashing = A command execution is in progress.

Each circuit board controls up to ten 1, 2 or 3 pole motorized circuit breakers.

Each motorized breaker acts as a circuit protection device as well as a remotely operated switch. The breaker handle moves only when over-current-tripped or manually turned off.

Master and Slave control boards are used depending upon the number of DMX universes served. (Slaves have no DMX input or output components).

DMX signals are fed to the Master board/s from the appropriate DMX universe.

Power, DMX and EDO data are daisy-chain fed board-to-board by the yellow jumper connectors.
(**EDO** = **E**mergency **D**MX **O**verride)

The **STARTING DMX** address is set for each board by jumpers. Depending on the results of a power-up-scan, consecutive DMX addresses are only used for the headers with breakers attached.

The DMX Output is an optoisolated, buffered, loop-thru for driving other DMX devices.

Output data availability is indicated by a small-green flickering **DMX Output** LED.

MANUAL TEST CONTROL

The circuit breakers may be manually controlled by the **TEST** switches on each board.

The test switches work in the absence of a DMX signal. A valid DMX signal, indicated by a flashing large-green **Receiving DMX** LED, overrides the test switches.

Emergency DMX Override

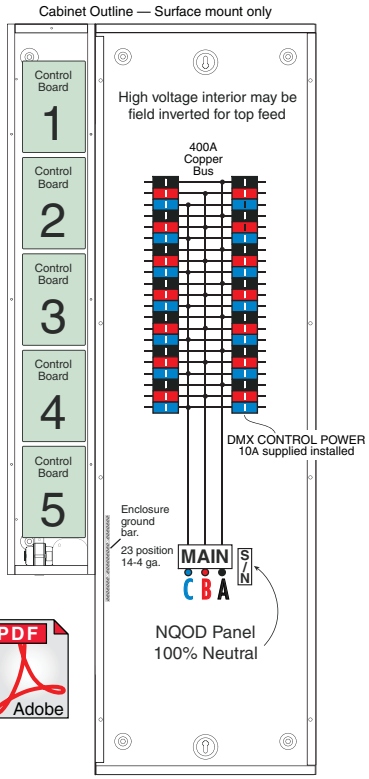
Outside dimensions:
28.06" w., 68.2" h., 6.13" d.

Knockout panels supplied in both ends

Cabinet Outline — Surface mount only



Specifier's Guide for LynTec Lighting Control Panels

Load Center and Panelboard part number explanation

Load Center — Panelboard — What's the difference?

Panelboards are the electrician's choice because they have 3 times the wiring space. Panelboards are used when bolt-on breakers, 200% neutrals or high circuit counts are required.

Load Centers are typically used where the circuit count isn't high, offering the lowest cost.

Lighting Control Panelboards

LCP 341- 30 -2U -MJG3200

- **3** = 3 phase 208/120v, 4 wire
- **41** Number of available single pole circuit breaker spaces
- **10 20 30 40 50** Control board capacity— will drive up to this **number** of 1, 2 or 3 pole motorized breakers
- **1U 2U 3U 4U 5U** **number** of DMX512 **U**niverses
- **-M**ain breaker & **-M**ain **L**ug **O**nly options **SEE BELOW**

3 Phase Panelboards

400 A Panelboard

The standard LCP 341-xx-M400 has a LA36**400**, 3 pole, 400 Amp main breaker (115 kVA). 10kAIR [Amps Interrupt Rating].

Optional main breakers — call for price and delivery.

-MLO (**M**ain **L**ug **O**nly) is an option.

225 A Panelboard

The standard LCP 341-xx has a JGP36**225**, 3 pole, 225 Amp main breaker (65 kVA).

65k AIR [Amps Interrupt Rating].

Optional main breakers [All 65kAIR]

125A ..... **-MHG3125** (36 kVA transformer)
150A ..... **-MJG3150** (45 kVA)
175A ..... **-MJG3175** (50 kVA)
200A ..... **-MJG3200** (60 kVA)
-MLO (**M**ain **L**ug **O**nly) is an option.

Multiple DMX512 Universe Option

LynTec Lighting Control panels have the option of multiple universe control. All **LC-10** boards service up to **10** - one, two or three pole motorized breakers. The first/top control board is always a LC-10**M** **M**aster board. The Master board has the opto-isolated DMX512 input and opto-isolated, buffered, feed-thru output components.

In a standard one-universe system, the subsequent boards are slaves. The lower-cost, LC-10**S** **S**lave boards have their own starting address, but derive their opto-isolated DMX data from the Master board above.

When multiple universes are desired, two or more LC-10**M** **M**aster boards are supplied.
Each universe requires a **M**aster board. Any **M**aster may have one or more subsequent slaves. See page 3 for possible board counts in each type panel.

Please include Branch Breakers to complete your specification.

Lighting Control Load Centers

LCLC**H** 341- 30 -2U -MQD3200

- ▲ **H option** 65k AIR Main Breaker. Amps Interrupt Rating (Available only on **341**)

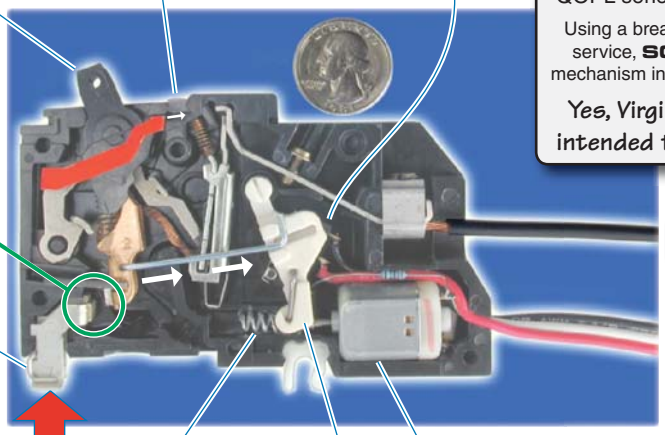
RBLC-10 or RBLC-20
10 or 20 circuit
Remote Breaker Lighting Controller

Provides DMX control for any Square D QO panel by using **BMB** or **MB** breakers.

The UL listed heart of the LynTec Lighting Control and Sound Sequencing Panels



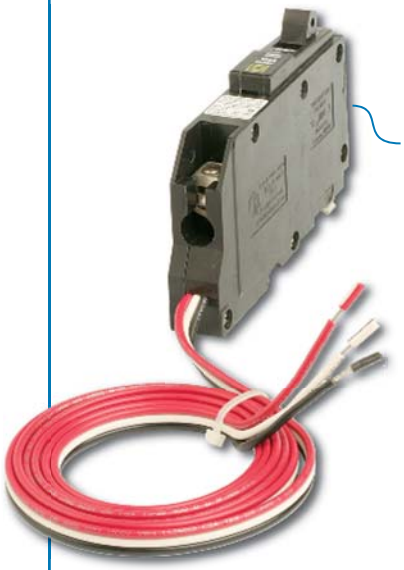
The time-proven **SQUARE D** QOPL series motorized circuit breaker.

Using a breaker proven in over 20 years of service, **SQUARE D** added a motor mechanism in 1986 to provide remote control.

Yes, Virginia, some breakers are intended to be used as switches!

Field installed, UL & CSA listed, motorized circuit breakers are required to complete the Lighting Control Panel package.

BLUE TYPE = Bolt-on breakers for Panelboards ONLY — Clip-on breakers fit Load Centers or Panelboards



BMB-15 ..... **B**olt-on **M**otorized **B**reaker, Square D #QOB115PL-5393
MB-15 ..... Clip-on **M**otorized **B**reaker, Square D #QO115PL-5393
One pole, 15 Amps. Special 60" leads. Square D trip curve: 730-4

BMB-20 ..... **B**olt-on **M**otorized **B**reaker, Square D #QOB120PL-5393
MB-20 ..... Clip-on **M**otorized **B**reaker, Square D #QO120PL-5393
One pole, 20 Amps. Special 60" leads. Square D trip curve: 730-4
15 and 20 Amp breakers have a HM, (High Magnetic) rating.
HM reduces nuisance breaker trips on high inrush loads.

Instruction Bulletin

QO-PL (Plug-on), QOB-PL (Bolt-on) Powerlink® Remotely Operated Circuit Breakers

(Use in Type QO Load Centers and Type NQO, NQOB, and NQOD Panelboards)

Retain for future use.

REQUIREMENTS

Remotely Operated Circuit Requirements

⚠ DANGER

HAZARD OF ELECTRIC SHOCK, BURN, OR EXPLOSION.

When servicing a branch circuit fed by a remotely operated circuit breaker, move handle of remotely operated circuit breaker to OFF position. Do not rely on remote operation to open circuit breaker.

Failure to follow these instructions will result in personal injury or death.

POWERLINK® QO(B)-PL Remotely Operated Circuit Breakers require a power supply capable of delivering at least two amperes at 24 Vdc for a minimum of 50 milliseconds. One-, two-, and three-pole circuit breakers all have one internal motor, and power requirements are the same regardless of the number of poles and ampere ratings.

The required power supply ampacity and control device contact rating are determined by the number of circuit breakers to be switched simultaneously (i.e., four circuit breakers switched simultaneously require a power supply and a control device contact rated 8 amperes minimum). The control device may be either a normally-open (NO)/ normally-closed (NC) contact; a single-pole, double-throw switch (SPDT); or other three-wire control device.

CIRCUIT BREAKER INSTALLATION

⚠ DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

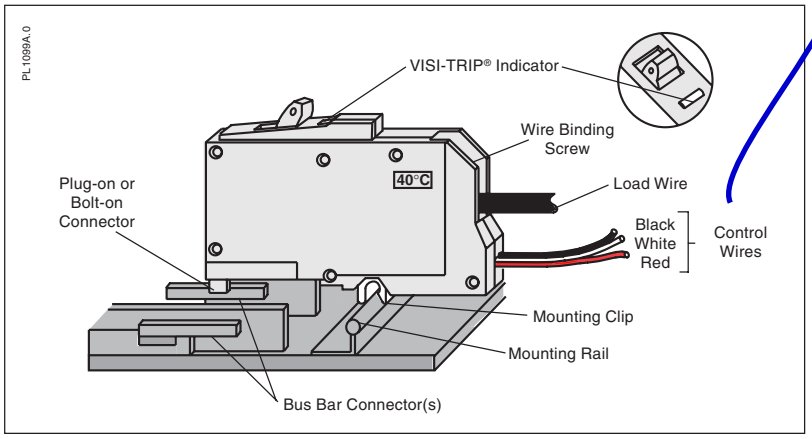
- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices. See NFPA 70E.
- This equipment must be installed and serviced only by qualified electrical personnel.
- Turn off all power supplying this equipment before working on or inside equipment.
- Always use a properly rated voltage sensing device to confirm power is off.
- Replace all devices, doors, and covers before turning on power to this equipment.

Failure to follow these instructions will result in death, or serious injury.

1. Turn off all power supplying this equipment before working on or inside equipment.
2. Before installing circuit breaker turn circuit breaker handle to OFF position.
3. Remove panelboard cover and deadfront. Verify power is off with voltage meter before proceeding.

Installation of circuit breaker into panelboard/load center (refer to figure below)

All LynTec supplied breakers have special 60” control wires. (Square D standards are 18”.)



4. Except for remotely operated connections, QO(B)-PL remotely operated circuit breakers are installed in a panelboard/load center the same as conventional QO(B) circuit breakers.

Connection of remotely operated circuit (refer to the figure on next page)

5. Assure that power supply and control device meet requirements listed under "Remotely Operated Circuit Requirements."

See page 2 for LynTec part number explanation

CIRCUIT BREAKER INSTALLATION

CAUTION

HAZARD OF CIRCUIT BREAKER DAMAGE.

Connect the 24 Vdc remote control wiring as shown on this page.

Failure to follow these instructions can permanently damage the remotely operated circuit breaker.

6. All wiring and splicing must comply with applicable code requirements for Class 1 circuits. Refer to paragraph 373-8 and article 725 of the National Electrical Code.

7. Three #18 AWG control wires are attached to the remotely operated circuit breaker for connection to the power supply and remote control device and should be cut to the required length to reach the splice connections. Use #18 AWG or larger conductors with 600 V insulation and approved wire connectors for splices.

8. Connect the black lead of the remotely operated circuit breaker to the negative (-) terminal of the 24 Vdc power supply. Connect the red lead of the remotely operated circuit breaker to the positive (+) terminal of the 24 Vdc power supply. Connect the white lead of the remote control device. The remote control device provides connections between either positive or negative potential of the power supply and the white wire of the remotely operated circuit breaker, as appropriate.

9. Applying the positive potential of the power supply to the white wire (contact closure between the red wire and white wire) will operate the remote mechanism of the circuit breaker to the OFF position. Applying the negative potential of the power supply to the white wire (contact closure between the black wire and the white wire) will operate the remote mechanism of the circuit breaker to the ON position. A control circuit utilizing a normally open (NO)/normally closed (NC) contact is illustrated below.

NOTE: The remote mechanism will not move the circuit breaker handle. Also, the remote mechanism cannot turn power ON when the circuit breaker is tripped (VISI-TRIP® flag indicator showing) or when the circuit breaker handle is in the OFF position.

Installation of the trim and operational checks

10. Remove corresponding twist-out from panelboard trim and replace trim.

11. Turn power to panelboard on.

12. Turn remotely operated circuit breaker handle to the ON position.

13. Turn power to the remotely operated circuit on and test this circuit, turning remotely operated circuit breaker off remotely, then on remotely. If power to remote controlled circuit breaker load does not switch off and on, turn off power to remotely operated circuit and panelboard and check wiring.

NOTE: A power supply is available from Square D Company, Cat. No. QOPLPS (plug-on) or QOBPLPS (bolt-on).

▲ Suffixes HID, SWD and SWN may also be applied to the applicable branch circuit breakers shown above, except suffix SWN may **NOT** be applied in combination with LC main circuit breakers.
■ Where QO (B) circuit breakers are shown above, QO (B) H, QO (B) VH, and QH (B) circuit breakers may also be used.
◆ For shown circuit breakers rated less than this maximum voltage, the indicated short circuit current rating also applies, but at the voltage rating of the circuit breaker.
★ Only 15–30 A circuit breakers may be used when the LC circuit breaker is rated 450, 500 or 600 A.
▼ Circuit breakers may not be used when the LC circuit breaker is rated 450, 500 or 600 A.
△ Obsolescent. Contact your nearest Square D/Schneider Electric sales office for replacement circuit breaker. One-pole FJ circuit breakers are still available.
Where QO(B) GFI circuit breakers are shown above, QO(B), EPD circuit breakers may also be used.
